

Java

```
class Solution {  
    public char kthCharacter(String s, long k) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} s  
 * @param {number} k  
 * @return {character}  
 */  
var kthCharacter = function(s, k) {  
  
};
```

TypeScript

```
function kthCharacter(s: string, k: number): string {  
  
};
```

C++

```
class Solution {
```

```
public:
    char kthCharacter(string s, long long k) {

    }
};
```

C#

```
public class Solution {
    public char KthCharacter(string s, long k) {

    }
}
```

Kotlin

```
class Solution {
    fun kthCharacter(s: String, k: Long): Char {

    }
}
```

Go

```
func kthCharacter(s string, k int64) byte {

}
```
